The FrostBuster Model LD5030 has a rugged fuel oil fired 329,000 BTU boiler.

The unit can thaw up to 6000 sq ft. by spacing the lines 24" apart. Depending on conditions, the unit can thaw up to a maximum of 1' per 24 hour period with proper blanket coverage. Higher thaw rates can be obtained by spacing the lines at closer than 24".

During the curing stage the lines can be spaced at 48" allowing coverage of 12,000 square feet.

User-Friendly Controls and Gauges.

Exclusive Level Control and Electric Reel makes rolling up the Thermal Hose a snap.

Customers are required to report hours and check oil and coolant levels on a daily basis. Damage waiver of 7% includes routine repair and maintenance to the unit.
